## SenDEC MotorTACH™

Tachometer and Hour meter with Flash Alert option

Included:

- ✓ SenDEC Motor Minder
- ✓ RPM pickup Sensor
- ✓ Motor shaft magnet disc

### Installation:

Simply Epoxy the rare earth magnet to any Motor shaft (the tiny rare earth magnet is only 1/8" diameter and is feather weight). Use an epoxy that bonds to metal. Mount the RPM sensor to a bracket so the nose of the sensor is within 1/4" from the magnet face.

**Note1:** This product is tested at the SenDEC factory during and after manufacturing. Therefore, there may be up to one tenth of an hour (0.1) accumulated on the meter because of testing.

**Note2:** Handling of the meter wires during hookup may cause the meter run temporarily (show RPM). This is because of static and will stop after the wires are hooked up, or are no longer handled.
